Steel Roofing Systems,

Thanks for the great job on our new roof! It's been 2+ months since installation and we've noticed a much cooler house on hot days. Our upstairs area has always been a problem when the temperature is up. Now, with the increased insulation from the roof, I no longer have to avoid that area during the day. Can't wait until next summer when we can compare energy usage.

We are having cool weather now and it seems that the temperature stays much more constant and the heater doesn't run as frequently.

The roof looks beautiful and the gutter system is saving us much work as the leaves are dropping...

Thanks again
